DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Kapadia (US Patent No. 4,568,846).

Regarding claims 10-12, Liu et al. disclose a synchronous induction motor comprising: a stator equipped with a stator winding (Fig. 9); a rotor which is secured to a rotating shaft (16) and which rotates in the stator; a secondary conductor (45) provided around the rotor yoke constituting the rotor; and permanent magnets (41) embedded in the rotor yoke, each said permanent (or magnet as in claims 11 and 12) magnet having a linear shape and provided symmetrically about a line that connects two magnetic poles, wherein at least some of the permanent magnets (41) have lengths which are radially disposed such that one end of each of said at least some of the permanent magnets is adjacent to the rotating shaft, wherein a magnetic field produced by the permanent magnets does not pass through the rotating shaft (or bypasses the rotating shaft as in claim 11, or passes through only the rotor yoke, excluding the rotating shaft (claim 12).

Response to Arguments

Art Unit: 2834

2. Applicant's arguments filed on 7/12/2007 have been fully considered but they are not persuasive. The applicant's argument is on the ground that the reference the Examiner relies on, Kapadia, fails to show the limitation "the magnetic field produced by the magnets either does not pass through the rotating shaft (claim 10); bypasses the rotating shaft (claim 11), or passes through only the rotor yoke, excluding the rotating shaft" as recited in the claims because Fig. 2 shows the flux for the magnets passing through shaft 16. The Examiner respectfully disagrees with the Applicant because the claims do not require "the magnetic field produced by the magnets does not pass through the rotating shaft" or all magnetic field produced by the magnets does not pass through the rotating shaft. The claims require "a magnetic field produced by the magnets does not pass through the rotating shaft". Fig. 2 clearly shows a magnetic field with reference sign 52 or 55 does not pass through the rotating shaft 16. Because each and every limitations of the claims have been fulfilled by Kapadia, the rejection is still deemed proper.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 2834

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
